Dual Complication of Visceral Leishmaniasis-Hemophagocytic Lymphohistiocytosis and Myocarditis–A Case Report

Published On: May 19, 2026 | Pages: 001 - 005

Author(s): Eyosias Lemma Teshome, Henok Baharu Wedajeneh, Tigist Desta Beyene and Temesgen Assefa Ayele*

Visceral Leishmaniosis is a life-threatening protozoal disease that can affect multiple organs. It typically presents with fever, hepatosplenomegaly, and cytopenia, but can sometimes manifest with rare complications. This case report discusses a 20-year-old male who presented with intermittent low-grade fever, night sweats, loss of appetite, vomiting of ingested matte ...
