Acute on Chronic Renal Failure has Worse Postoperative Outcomes than End-Stage Renal Disease Following Cardiac Surgery

Published On: April 04, 2017 | Pages: 026 - 032

Author(s): Bar Durgun, Ahmet Yüksel*, Gökhan Erol, Mevlüt Kobuk and Suat Doanc

Background: Renal failure is a systemic disorder and has destructive effects among all organs including cardiovascular system. The development of postoperative acute kidney injury has been recognized as one of the strongest risk factor for mortality in patients undergoing cardiac surgery. ...

Comparison of MELD and Child- Pugh Score for the Prediction of Survival in Portal Hypertension Undergoing Transjugular Intrahepatic Portosystemic Shunt

Published On: March 22, 2017 | Pages: 020 - 025

Author(s): Liu Kai, Wang Shikai, Wu Xingjiang*, Fan Xinxin, He Changsheng and Li Jieshou

Objectives: Recently, the model for End-Stage Liver Disease (MELD) was proposed for the prediction of survival in transjugular intrahepatic portosystemic shunt (TIPS) patients. We therefore compared the prognostic accuracy of the MELD model and the Child-Pugh score, in an unselected cohort of TIPS patients followed long-term. ...
