Retrospective Analysis of Mifepristone for the Cervical Preparation of Labour Induction in Live Births

Published On: August 09, 2025 | Pages: 011 - 018

Author(s): Beda Hartmann*, Sylvia Kirchengast, Johannes Huber, Lisa Rindler, Melanie Colegrave, Herbert Kurz and Linda AW Verhagen

Background: Mifepristone is a synthetic antagonist of progesterone and glucocorticoid receptors that is sometimes used for the induction of labour. However, because it is licensed as an abortive agent, its safety profile in healthy deliveries may be of concern. Therefore, this study aimed to evaluate the maternal and neonatal safety of mifepristone for the preparation ...
