Port-Site Metastasis (PSM): Definition, clinical contexts and possible preventive actions to reduce risk

Published On: December 02, 2021 | Pages: 088 - 092

Author(s): Giulio Perrotta*

The "port-site metastasis" represents a tumor recurrence that develops in the abdominal wall within the scar tissue of the insertion site of one or more trocars, after laparoscopic surgery, not associated with peritoneal carcinomatosis. This last aspect is central because in the literature some isolated cases are reported, but most cases are associated with peritoneal ...
