Methamphetamine abuse: The link between Immunosuppression, Fournier's gangrene and Candida

Published On: November 29, 2017 | Pages: 069 - 071

Author(s): Workman A*, Rajesh G

Fournier's gangrene is a rapidly progressive and potentially fatal infective necrotizing fasciitis of the perineum, external genitalia and/or perianal regions. The most common etiology of the infection is bacterial; however, there have been published cases of Fournier's gangrene caused by yeast in patients with severe immunosuppression. Cutaneous fungal infections are ...

Morel-Lavallée Lesion: A not so rare, but often missed diagnosis

Published On: August 02, 2017 | Pages: 064 - 065

Author(s): KTM Opdam, R van de Coevering and I van der Haven*

The Morel-Lavallée lesion is a closed, post-traumatic, soft tissue degloving injury. There is separation of the skin and subcutaneous tissue from the underlying fascia resulting in an effusion and creation of a perifascial space often containing lymph and necrotic fat. ...
