Case Report of a Broken Tip of a Thrombus Aspiration Catheter in an Acute Coronary Syndrome in a Patient with Heart Block

Published On: January 13, 2026 | Pages: 001 - 004

Author(s): Tayeb Ali Bafadhl*

We describe 67 years old male patient presenting with acute coronary syndrome (acute inferior ST elevation) with complete heart block. Primary percutaneous coronary intervention was decided with temporary pacemaker insertion. In view thrombus burden lesion in the proximal right coronary artery. We did thrombus aspiration using a thrombus aspiration catheter. After suc ...
